

ACEDXTRADES APP REVAMP PRD

1. Product Overview

1.1 Background

> ACEDXTRADES is a digital exchange platform that enables users to trade crypto, pay bills, and exchange gift cards without the delays and risks associated with informal vendors.

The current product delivers functional value but struggles with:

- UX complexity
- Speed perception issues

- Trust gaps during transactions
- Low post-onboarding retention

The 2026 revamp focuses on **clarity, speed, trust, and habit formation**.

1.2 Problem Statement

Users want:

- Fast and predictable transactions
- Clear confirmations
- Confidence their money is safe
- Fewer steps to complete actions

Current issues:

- Too many steps per transaction
- Weak success/error feedback
- Users unsure whether actions succeeded
- App feels functional, not premium

🎯 2. Goals & Objectives

Primary Goals

- Increase transaction completion confidence
- Reduce drop-offs in core flows
- Improve repeat usage & retention
- Prepare infrastructure for card scaling

Secondary Goals

- Reduce support tickets
- Improve App Store ratings
- Strengthen fintech brand credibility

🏆 3. Success Metrics (KPIs)

Core Metrics

- Transaction completion rate ↑
- Average transaction time ↓
- Day 7 retention ↑
- Day 30 retention ↑
- Support tickets per 1,000 users ↓

UX Metrics

- Time to first successful transaction
- Number of steps per core flow
- Post-transaction confidence feedback

🎯 4. Target Users

Primary Users

- Nigerian crypto users (18–40)
- Freelancers & online earners
- Users migrating from WhatsApp vendors

- Speed and trust-focused users

Secondary Users

- Bill payers (data, airtime, utilities)
- Gift card traders
- High-frequency power users

---

5. Scope Definition

In Scope

- Full UI/UX redesign
- Core flow simplification
- Performance optimization
- Error, loading, empty & success states
- Virtual & Physical card design + launch
- Security & compliance improvements

Out of Scope

- DeFi / staking
- NFTs
- Lending or credit
- International expansion

---

6. Product Principles

1. **Speed beats aesthetics**
2. **Clarity over optionality**
3. **Never leave users guessing**
4. **Every action must confirm outcome**
5. **Design for low patience environments**

---

7. Feature Requirements

7.1 Onboarding

Problems

- Users unsure what to do next
- Weak activation moment

Requirements

- 3–4 step onboarding
- Clear value explanation
- Guided first transaction
- KYC explanation without friction

Acceptance Criteria

- User understands value within 60 seconds
- First action is clearly prompted

7.2 Home Dashboard

Problems

- Poor information hierarchy
- Important actions buried

Requirements

- Balance visibility upfront
- Clear primary CTAs (Deposit, Withdraw, Swap, Bills)
- Transaction status visibility
- Recent activity preview

Acceptance Criteria

- User starts a transaction in less than 2 taps

7.3 Wallet

Problems

- Confusing balances
- Trust issues during transfers

Requirements

- Available vs pending balance clarity
- Real-time transaction status
- Warnings for risky actions
- Clear confirmations

Acceptance Criteria

- No ambiguity about wallet state

7.4 Crypto Flows (Swap/ Deposit/ Withdraw)

Problems

- Too many steps
- Weak error messaging

Requirements

- Reduce steps by ≥30%
- Inline validations
- Clear rate & fee visibility
- Strong success/failure screens

Acceptance Criteria

- User always knows what happened

7.5 Bill Payments

Problems

- Slow repetitive flows

Requirements

- Fast buy / fast pay
- Saved beneficiaries
- Receipts & confirmations

7.6 Gift Cards

Problems

- Upload confusion
- Review anxiety

Requirements

- Clear upload instructions
- Status tracking (Submitted → Reviewed → Paid)
- Estimated review times

7.7 Virtual & Physical Cards

Objective
Enable seamless spending of crypto value while reducing bank dependency.

Virtual Card

- Instant issuance
- Online payments
- Wallet funding
- Limits, freeze & controls

Physical Card

- Request & delivery tracking
- Spending controls
- Transaction history

Compliance

- Tier-based KYC limits
- Fraud monitoring
- Card partner integration

---

8. Non-Functional Requirements

Performance

- App load < 3 seconds
- Transactions feel instant

Reliability

- Graceful failure handling
- Retry & fallback mechanisms

Security

- Encrypted transactions
- Secure APIs
- Regular audits

---

9. QA & Testing

- Unit testing
- Integration testing
- Stress testing
- Security testing
- Internal beta (30–70 users)

---

10. Dependencies & Risks

Dependencies

- Card partners
- Wallet infrastructure (Obiex)
- App Store approvals
- Play Store approvals

Risks

- Regulatory delays
- Card partner downtime

- Performance bottlenecks

Mitigation

- Feature flags
- Soft launch
- Phased rollouts

---

11. Launch Plan

Soft Launch

- Limited user rollout
- Monitor failures
- Fix critical issues

Public Relaunch

- Marketing & PR rollout
- Influencer activation
- Community education

---

12. Post-Launch Plan

- Daily KPI monitoring
- Weekly iteration cycles
- UX refinements
- Prepare next roadmap

📝 **PM NOTE**

This revamp is about **trust, speed, and habit** — not features.
If executed well, cards become a growth multiplier, not a risk surface.
